A;Description: EC 6.1.1.2 [validated, MUID:94009008]; catalyzes the ATP-dependent format A;Note: mammalian WRS (tryptophanyl-tRNA synthetases) and eRF (polypeptide chain release C;Superfamily: mammalian tryptophan-tRNA ligase; amino acid-tRNA ligase; repeat homology C;Keywords: aminoacyl-tRNA synthetase; ATP; homodimer; ligase; metalloprotein; protein t P;23-68/Domain: amino acid-tRNA ligase repeat homology <ATL>
F;174-177/Region: ATP-binding motif (HXGH)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     tryptophan-tRNA ligase (EC 6.1.1.2) [validated] - rabbit
N;Alternate names: tryptophanyl-tRNA synthetase
C;Species: Oryctolagus cuniculus (domestic rabbit)
C;Date: 30-Sep-1992 #sequence revision 13-Feb-1998 #text_change 03-Jun-2002
C;Accession: A35904; S37396
C;Accession: A35904; S37396

tryptophan-tRNA ligase (EC 6.1.1.2) - Methanococcus jannaschii

N;Alternate names: tryptophanyl-tRNA synthetase
(;Species: Methanococcus jannaschii
C;Date: 13-Sep-1996 #text_change 03-Jun-2002
C;Accession: F64476
R;Bult, C.J.; White, O.; Olsen, G.J.; Zhou, L.; Fleischmann, R.D.; Sutton, G.G.; Blake, R; Reinth, C.I.; Overbeek, R.; Kirkness, E.F.; Weinstock, K.G.; Merrick, J.M.; Glodek, A.; rson, J.D.; Sadow, P.W.; Hanna, M.C.; Cotton, M.D.; Roberts, K.M.; Hurst, M.A.
Science 273, 1058-1073, 1996
A;Authors: Kaine, B.P.; Borodovsky, M.; Klenk, H.P.; Fraser, C.M.; Smith, H.O.; Woese, C.A;Title: Complete genome sequence of the methanogenic archaeon, Methanococcus jannaschii
A;Reference number: A64300; MUID:96337999; PMID:8688087
A;Accession: F64476
A;Status: preliminary; nucleic acid sequence not shown; translation not shown
A;Residues: 1-370 <BUL>
A;Cross-references: GB:U67582; GB:L77117; NID:g1592064; PIDN:AAB99425.1; PID:g1592065; TC;Genetics:
A;Map position: FOR137585-1376997
A;Start codon: GTG
C;Superfamily: mammalian tryptophan-tRNA ligase; amino acid-tRNA ligase repeat homology
C;Keywords: aminoacyl-tRNA synthetase; ligase; protein biosynthesis

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                        104.5

RESULT 1 US-08-876-885-26

Sequence 26, Application US/08876885 Patent No. 6174713

GENERAL INFORMATION:
APPLICANT: Shen, Xiaoyu

APPLICANT:
APPLICANT:

APPLICANT: Houman, Fariba
TITLE OF INVENTION: CANDIDA CYTOPLASMIC TRYPTOPHANYL-tRNA
TITLE OF INVENTION: SYMTHETASE PROTEINS, NUCLEIC ACIDS AND STRAINS COMPRISING
TITLE OF INVENTION: SAME
NUMBER OF SEQUENCES: 26

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              decreased angiogenesis in a mammal, in particular humans. It is also useful in diagnosis and as a wound healing agent for treating wounds such as dermal ulcers, diabetic ulcers, burns and injuries and in plastic surgery when reconstruction is required following a burn or for cosmetic purposes. It is particularly useful in the treatment of abdominal wounds where there is high risk of infection. Truncated TrpRS promotes endothelialization in vascular graft surgery and is used in conjunction with angiography to administer the angiogenic tRNA synthesase polypeptides or polynucleotides directly to the lumen and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     TrpRS is useful for regulating angiogenesis, tumor metastasis, enhancing angiogenesis to a graft, treating myocardial infarction, solid tumor, and a condition that would benefit from increased or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The sequences given in AAB47615-18 show full length and truncated versions of trptophanyl-tRNA synthetase (TrpRS). The truncated TrpRS of the invention comprises a Rossmann fold nucleotide binding domain; and is capable of regulating vascular endothelial cell function. It is of approx. 40 kilo Dalton molecular weight and is produced by cleavage of full length TrpRS with polymorphonuclear leucocyte elastase. Truncated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New human truncated tyrosyl-tRNA synthetase polypeptide for regulating vascular endothelial function, in particular for regulating angiogenesis, tumor metastasis and treating myocardial infarction -
Human; tryptophanyl-tRNA synthetase; TrpRS; tyrosyl t-RNA synthetase;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                       Human supermini tryptophanyl t-RNA synthetase in pET20B

Novel truncated tryptophanyl-tRNA synthetase polypeptides capable of regulating vascular endothelial cell function, preferably angiogenesis, is useful for treating solid tumor or suppressing tumor metastasis in

Example 1; Page 129-130; 149pp; English

CC truncated tryptophanyl-tRNA synthetases (TrpRS) comprising a Rossmann CC fold nucleotide binding domain and polynucleotides encoding them. The CC invention also relates to tyrosyl t-RNA synthetases (TyrRS). TrpRS CC sequences are useful for regulating vascular endothelial cell function, CC preferably angiogenesis. Angiogenic TrpRS sequences are useful as wound CC healing agents for re-vascularising damaged tissues. They are useful as wound CC treating full-thickness wounds (e.g. dermal ulcers, including pressure CC sequences can also be used in plastic surgery when reconstruction is CC required following a burn, other trauma, or even for cosmetic purposes. CC Angiogenic TrpRS is also used in association with surgery and following the repair of cuts, for promoting endothelialisation in vascular graft CC surgery and for repairing the damage of myocardial infarction and in CC conjunction with coronary bypass surgery by simulating the growth of CC transplanted tissue. TrpRS is also used in conjunction with angiography. CC promoting endothelialisation with angiography. CC promoting endothelialisation with angiography. CC myst shape antibodies may also be used to treat inflammation CC conjunction with coronary bypass surgery by simulating the growth of CC myst shape antibodies may also be used to treat inflammation CC conjunction with endotes may also be used to treat inflammation CC solid tumours. These antibodies may also be used to treat inflammation CC solid tumours to the activity and retard the growth of CC promoting the activity and preventing further growth of CC promoting the activity and retard the growth of CC promoting the activity of the conjunction with angiogenesis. The presence of tumours the activity of conjunction with angiogenesis. The presence is human truncated by conjunction with angiogenesis. The presence is human truncated conjunction in pET20B. discloses human aminoacyl tRNA synthetases,

The sequences given in AAB47615-18 show full length and truncated versions of trytophanyl-tRNA synthetase (TryRS). The truncated TryRS of the invention comprises a Rossmann fold nucleotide binding domain, and is capable of regulating vascular endothelial cell function. It is of approx. 40 kilo Dalton molecular weight and is produced by cleavage of full length TryRS with polymorphonuclear leucocyte elastase. Truncated TryRS is useful for regulating angiogenesis, tumor metastasis, enhancing angiogenesis to a graft, treating myocardial infarction, solid tumor, and a condition that would benefit from increased or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Tyrosyl-tRNA synthetase; TyrRS; Rossmann fold nucleotide binding domain; vascular endothelial cell function; burn; plastic surgery; abdomen; polymorphonuclear leucocyte elastase; angiogenesis; tumour metastasis; angiogenesis; graft; myocardial infarction; solid tumour; wound healing; dermal ulcer; diabetic ulcer; endothelialization;
decreased angiogenesis in a mammal, in particular humans. It is also useful in diagnosis and as a wound healing agent for treating wounds such as dermal ulcers, diabetic ulcers, burns and injuries and in particular humans. It is also useful in diagnosis and as a wound healing agent for treating wounds such as dermal ulcers, diabetic ulcers, burns and injuries and in particular humans.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       for cosmetic purposes. It is particularly useful in the treatment abdominal wounds where there is high risk of infection. Truncated promotes endothelialization in vascular graft surgery and is used conjunction with angiography to administer the angiogenic tRNA synthetase polypeptides or polynucleotides directly to the lumen a wall of the blood vessel.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence

Novel truncated tryptophanyl-tRNA synthetase polypeptides capable of regulating vascular endothelial cell function, preferably angiogenesis, is useful for treating solid tumor or suppressing tumor metastasis in

Example 1; Page 123-124; 149pp; English

CC truncated tryptophanyl-tRNA synthetases (TrpRS) comprising a Rossmann CC fold nucleotide binding domain and polynucleotides encoding them. The CC invention also relates to tyrosyl t-RNA synthetases (TyrRS). TrpRS CC sequences are useful for regulating vascular endothelial cell function, CC preferably angiogenesis. Angiogenic TypRS sequences are useful as wound CC healing agent for re-vascularising damaged tissues. They are useful for treating full-thickness wounds (e.g. dermal ulcers, including pressure CC sores, venous ulcers and diabetic ulcers), burns and injuries. TrpRS CC sequences can also be used in plastic surgery when reconstruction is CC required following a burn, other trauma, or even for cosmetic purposes. CA Angiogenic TypRS is also used in association with surgery and following the damage of myocardial infarction and in CC conjunction with coronary bypass surgery by stimulating the growth of CC transplanted tissue. TrpRS is also used in conjunction with angiography. TrpRS DNAs are useful in gene therapy. TrpRS antibodies are used in CC immunoassays to detect the presence of tumours. They are also useful for process by antisense technology is useful for preventing further growth of CC caused by increased vascular permeability. Inhibiting the activity of CC repRS by antisense technology is useful for preventing further growth CC psoriasis, diabetic retinopathy, all of which are characterised by cabnormal angiogenesis. The present sequence is human truncated CC tryptophanyl t-RNA synthetase (mini TrpRS; residues 48-471 of cull-length TrpRS protein) protein in pET20B. aminoacyl tRNA synthetases, particularly

                                                                                                                                                                                                                 decreased angiogenesis in a mammal, in particular humans. It is also useful in diagnosis and as a wound healing agent for treating wounds such as dermal ulcers, diabetic ulcers, burns and injuries and in plastic surgery when reconstruction is required following a burn or for cosmetic purposes. It is particularly useful in the treatment of abdominal wounds where there is high risk of infection. Truncated TrpRS promotes endothelialization in vascular graft surgery and is used in conjunction with angiography to administer the angiogenic tRNA synthetase polypeptides or polynucleotides directly to the lumen and wall of the block access.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The sequences given in AAB47615-18 show full length and truncated versions of trytophanyl-tRNA synthetase (TrpRS). The truncated TrpRS of the invention comprises a Rossmann fold nucleotide binding domain, and is capable of regulating vascular endothelial cell function. It is of approx. 40 kilo Dalton molecular weight and is produced by cleavage of full length TrpRS with polymorphonuclear leucocyte elastase. Truncated TrpRS is useful for regulating angiogenesis, tumor metastasis, enhancing angiogenesis to a graft, treating myocardial infarction, solid tumor, and a condition that would benefit from increased or approach described a produced in the solid tumor increased or the solid tumor, and a condition that would benefit from increased or the solid tumor, and a condition that would benefit from increased or the solid tumor approach the solid tumor and a condition that would benefit from increased or the solid tumor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New human truncated tyrosyl-tRNA synthetase polypeptide for regulating vascular endothelial function, in particular for regulating angiogenesis, tumor metastasis and treating myocardial infarction -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      angiogenesis; graft; myocardial infarction; solid tumour; wound dermal ulcer; diabetic ulcer; endothelialization; tryptophanyl-tRNA synthetase; trpRS; vascular graft surgery.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Tyrosyl-tRNA synthetase; TyrRS; Rossmann fold nucleotide binding domai vascular endothelial cell function; burn; plastic surgery; abdomen; polymorphonuclear leucocyte elastase; angiogenesis; tumour metastasis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC required following a burn, other trauma, or even for cosmetic purposes.
CC Angiogenic TrpRS is also used in association with surgery and following the repair of cuts, for promoting endothelialisation in vascular graft cc surgery and for repairing the damage of myocardial infarction and in cc conjunction with coronary bypass surgery by stimulating the growth of cc transplanted tissue. TrpRS is also used in conjunction with angiography. CC TrpRS DNAs are useful in gene therapy. TrpRs antibodies are useful in cc immunoassays to detect the presence of tumours. They are also useful cc for blocking endogenous angiogenic activity and retard the growth of cc solid tumours. These antibodies may also be used to treat inflammation caused by increased vascular permeability. Inhibiting the activity of cropRS by antisense technology is useful for preventing further growth cc or even regress solid tumours, and for treating rheumatoid arthritis, cg psoriasis, diabetic retinopathy, all of which are characterised by cabnormal angiogenesis. The present sequence is human tryptophanyl cc abnormal angiogenesis. The present sequence is human tryptophanyl

The patent discloses human aminoacyl tRNA synthetases, particularly truncated tryptophanyl-tRNA synthetases (TrpRS) comprising a Rossmann fold nucleotide binding domain and polynucleotides encoding them. The invention also relates to tyrosyl t-RNA synthetases (TyrRS). TrpRS sequences are useful for regulating vascular endothelial cell function, preferably angiogenesis. Angiogenic TrpRS sequences are useful as wound healing agents for re-vascularising damaged tissues. They are useful for treating full-thickness wounds (e.g. dermal ulcers, including pressure sores, venous ulcers and diabetic ulcers), burns and injuries. TrpRS sequences can also be used in plastic surgery when reconstruction is

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         antagonists may have neuroprotective; cytostatic; cardioactive; immunomodulatory; muscular active general; vulnerary; gastrointestinal general; nephrotropic; antiinfective; gynecological; or antibacterial activity. The invention also includes antibodies specific for the protein or polynucleotide sequences. The lung cancer associated polynucleotide sequences may be used for detection of lung cancer, chromosome identification, as chromosome markers, and for numerous othe disgnostic or research purposes. The proteins may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders. The proteins may also be used in the treatment of wounds and infectious diseases. Polynucleotide sequences AAF18425 - AAF18433 and peptide AAB5849 are used in the course of the invention for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    associated proteins represented in Ambourty fractions and associated proteins and polynucleotide sequences, their agonists, and associated proteins and polynucleotide cytostatic; cardioactive;

The invention also relates to genes that are repressed in the presence of HCMV infection, designated HCMV-repressible genes (crg or crgs). The products can be used to obtain agents which can be used for anti-viral therapy, particularly anti-HCMV therapy. They can also be used for the development of drugs that would allow for higher dosage IFN treatments without the concomitant toxicity normally associated with administering high levels of IFN. The products can also be used for detection, diagnosis and drug screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAY05372;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                    decreased angiogenesis in a mammal, in particular humans. It is also useful in diagnosis and as a wound healing agent for treating wounds such as dermal ulcers, diabetic ulcers, burns and injuries and in plastic surgery when reconstruction is required following a burn or for cosmetic purposes. It is particularly useful in the treatment of abdominal wounds where there is high risk of infection. Truncated TrpRS promotes endothelialization in vascular graft surgery and is used in conjunction with angiography to administer the angiogenic trNA synthetase polypeptides or polynucleotides directly to the lumen and wall of the blood vessel.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            TrpRS is useful for regulating angiogenesis, tumor metastasis, enhancing angiogenesis to a graft, treating myocardial infarction, solid tumor, and a condition that would benefit from increased or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequences given in AAB47615-18 show full length and truncated versions of trptophanyl-tRNA synthetase (TrpRS). The truncated TrpRS of the invention comprises a Rossmann fold nucleotide binding domain, and is capable of regulating vascular endothelial cell function. It is of approx. 40 kilo Dalton molecular weight and is produced by cleavage of approx. 40 kilo Dalton molecular weight and is produced by cleavage of full length TrpRS with polymorphonuclear leucocyte elastase. Truncated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New human truncated tyrosyl-tRNA synthetase polypeptide for regulating vascular endothelial function, in particular for regulating angiogenesis, tumor metastasis and treating myocardial infarction -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Tyrosyl-tRNA synthetase; TyrRS; Rossmann fold nucleotide binding domain; vascular endothelial cell function; burn; plastic surgery; abdomen; polymorphonuclear leucocyte elastase; angiogenesis; tumour metastasis; angiogenesis; graff; myocardial infarction; solid tumour; wound healing; dermal ulcer; diabetic ulcer; endothelialization;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC fold nucleotide binding domain and polynucleotides encoding them. The CC invention also relates to tyrosyl t-RNA synthetases (TyrRS). TrpRS CC sequences are useful for regulating vascular endothelial cell function, CC preferably angiogenesis. Angiogenic TrpRS sequences are useful as wound CC treating full-thickness wounds (e.g. dermal ulcers, including pressure CC sores, venous ulcers and diabetic ulcers), burns and injuries. TrpRS cc sequences can also be used in plastic surgery when reconstruction is CC required following a burn, other trauma, or even for cosmetic purposes. CC Angiogenic TrpRS is also used in association with surgery and following the damage of myocardial infarction and in CC conjunction with coronary bypass surgery by etimulating the growth of transplanted tissue. TrpRS is also used in conjunction with angiography. CT TrpRS DNAs are useful in gene therapy. TrpRs antibodies are used in immunoassays to detect the presence of tumours. They are also useful for presence of tumours. They are also useful to treat inflammation CC caused by increased vascular permeability, Inhibiting the growth of CC TrpRS by antisense technology is useful for preventing further growth of CC promotomy of the compathy, all of which are characterised by increased vascular permeability. Inhibiting the activity of CC psoriasis, diabetic retinopathy, all of which are characterised by contrasts. The present sequence is human inactive tryptophanyl t-RNA synthetase (TrpRS) in pET20B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The inventuseful in developmental biology and in elucidating cell signalling.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Disclosure; SEQ ID NO 20655; 21pp + Sequence Listing;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               23-MAR-2000; 2000US-191637P

                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Drosophila melanogaster polypeptide SEQ ID NO 28401
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ABB67203 standard;
                                                                                                                                                                                                                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
